HACKCOM 26

Dear Participants,

Welcome to Hackcom, where technology is used to address the challenges of an increasingly connected world. This year, our theme is Building a Safer Digital World, a challenge that explores how innovation can help people protect their information, identify online risks, and navigate digital environments with greater confidence. As online communication, transactions, and services become part of everyday life, the need for practical digital safety solutions continues to grow.

From identifying misleading information to strengthening personal data awareness and recognizing online scams, technology offers new ways to help individuals make safer and more informed decisions. So, here's the question:

How can you use technology to make digital interactions safer, improve online awareness, and help people protect themselves against emerging digital threats?

Here are some clear directions for you to explore:

- Design a website that helps users assess the reliability of online articles, claims, and viral messages by examining their sources, comparing available evidence, and highlighting claims that require further verification. The platform should help users distinguish verified information from potentially misleading content.

- Develop a web-based tool that educates users about common online scams, suspicious messages, phishing attempts, and fraudulent websites. The platform should allow users to examine examples or submit suspicious messages for analysis, explain potential warning signs, and recommend appropriate safety measures.

- Create a website that helps individuals understand and manage their digital privacy. The platform should explain common privacy risks, provide interactive assessments of users' online habits, and recommend practical steps for improving account security, managing permissions, and protecting personal information.

We will conduct regular Zoom meetings to monitor your progress, so please ensure your entire team joins the WhatsApp group with +91 7007657162 (Sarvagya Tripathi) and +91 90447 27272(Mahib Abdul Qaiyoom) for effective coordination.

You have until 11:30 AM IST on October 16, 2026, to finalize your idea and until 9:30 AM IST on October 17, 2026, to submit your project

The opportunities for ideation and innovation within this theme are extensive, and as organizers, we eagerly anticipate solutions that make the digital world safer and more trustworthy.
Best Of Luck!
